

Kids Training Plan 3 days/week for 16 weeks

Prepare to train by building on your child's base level of fitness: First, buy your child great-fitting running shoes. Then, have them start walking, jogging, or running 10-15 minutes at least 3 days per week. Next, find ways they can cross-train (see Legend below for examples). The best way to have your child 'stick with it' is to find a friend or running club to train with! Be sure they warm up beforehand with dynamic exercises and stretch afterwards. Happy Training - and we hope your child has a great race!

Legend

Run/Walk Whether you run or walk, emphasize the importance of accomplishing the distance - pace is not as important on these days.

XT Cross training can be biking, elliptical, rowing, swimming, stairclimber, yoga/pilates class, plyometrics... anything EXCEPT running!

Strength Variable resistance machines, free weights, dumbbells, Bosu balls, etc.

Core Exercise desgied to working the abdominal and low back muscles (sit ups, planks etc). Yoga/pilates classes are excellent for engaging core muscle work.

Tempo Run 30-45 seconds faster per mile than your race pace goal (ie, if your goal is 9 min/mi, run an 8:30 min/mi or 8:15 min/mi as your tempo pace).

Neg Split Run the second half of the mileage faster than the first half. Negative splits improve strength, endurance and speed for your final kick.

Massage Full head-to-toe massage.

LSD Long Slow Distance: the goal of LSD runs are to log time on your feet. Go slow and take walk breaks, if needed.

Back-down Mileage decrease from the previous week will allow time for recovery.

Hills Choose a route that has some hills to increase your stamina.
